PRICE-LIST OF NURSERY STOCK

CULTIVATED AND FOR SALE BY

A. G. GELLETLY & CO.,

—NURSEYMEN—

STOCK GROWN AT

Williston, Caroline county, Md.

Mitchellville, Prince George's county, Md.

WILLISTON, MD.

HAVING been ten years in the nursery business, we are now capable of furnishing our patrons with the best stock that can be grown. We endeavor to keep up with all the latest varieties that have been tested and found to be profitable as market varieties as well as for home use. There are a great many novelties in the nursery business which are recommended highly by the originators for two or three seasons, but soon die out, as they are of no practical value. There are also some varieties which do well in their localities, but will not do well to carry abroad. These we can recommend only for their special location. We will only recommend fruit which has been thoroughly tested by us or by PRACTICAL FRUIT-GROWERS.

TERMS:

Cash before shipment, except by special agreement with old customers in good standing.

Remittances should be made by postal order on Denton postoffice, express order or registered letter.

All orders sent to us will have our personal attention, and will be packed with great care.

Standard Apples.

Having over seventy-five thousand apple trees, and over a hundred varieties to select from, we are able to furnish our patrons with the best summer, fall and winter apples. We have a good list of winter apples, the majority of which are only fall apples south of the Mason and Dixon line. Parties knowing what trees they want can order from our list, but those who would like good-keeping varieties, and do not know which are best to order, will do well to let us know their wants—whether for early, medium or late varieties; whether sweet or sour fruit, or late-keepers, &c., and we will be glad to make them a choice collection.

APPLES—20 cents each; \$1.75 per dozen; \$12.00 per hundred.

Crawford's Late,	Heath Cling,	Wonderful.
*Elberta,	Lemon Cling,	

Those varieties which are marked thus () are those which are generally planted, and should be in every collection.

Plums.

The propagation of plum trees is carried on in two ways. One way by being budded on peach, and the other by being budded on plum. Plums have generally been known to thrive best on the plum stalk; and we recommend trees that have been propagated in this manner. We have two classes of plums, namely, the Japan and the Americana or Chickasaw tribes; the former of which has generally given best satisfaction, although some of the varieties of the latter, such as the Wild Goose, etc., have given good results. Plums will grow vigorously in almost every part of this country, but it only bears its finest and most abundant crops on heavy loams or where there is considerable clay.

PLUM ON PLUM.

6 FEET AND UP, 40c EACH; \$3.75 PER DOZEN; \$30.00 PER 100; — PER 1000.

PLUM ON

4 TO 5 FEET, BRANCHED,	\$1.50 PER DOZEN;	\$10.00 PER 100;	\$80.00 PER 1000
3 TO 4 " " "	1.25 " " "	8.00 " " "	65.00 " " "
2 TO 3 " " "	.75 " " "	5.00 " " "	40.00 " " "

Cherries.

Cherries succeed on most soils and in nearly all localities throughout this country, but attain their greatest perfection upon those of a light gravelly or sandy nature, provided they are in good condition.

In planting Hearts and Bigarreans avoid damp or wet situations. The Dukes and Morellos will bear more moisture, but will flourish best in soil that grows the others to the greatest perfection. We recommend the planting of small trees as they have generally given best satisfaction.

2 TO 4 FEET,	30c EACH;	\$3.00 PER DOZEN;	\$25.00 PER 100.
4 " 6 " "	50c " "	4.50 " " "	40.00 " " "

HEART AND BIGARRIAN CHERRIES.

Bigarrian or Graffion,	Coe's Transparent,	Florence,
(Yellow Spanish),	Downer's Late Red,	Gov. Wood,
Black Tartarian,	Elton,	Louelling,
Black Heart,	Early Purple,	Rockport Bigarrian.

DUKE AND MORELLO CHERRIES.

The Dukes and Morellos are not so vigorous and upright in their growth as the Hearts and Begarrians; forming low, spreading heads, with an *acid* or *sub-acid* fruit.

Carnation,	Early Richmond,	Montmorency large
Dye-house,	Late Duke,	fruited
English Morello,	May Duke,	Olivet.

Select Apricots.

PER DOZEN \$2.50; EACH 25c.

This beautiful and excellent fruit needs only to be known to be appreciated. It ripens a month or more before the best early peaches and partakes largely of their luscious flavor. The tree is even more hardy than the peach and requires about the same treatment. To make a crop more certain plant on the north or west side of a wall, fence or building. We recommend the following varieties:

Alexis, (Russian, No. 4)	Nicholas, " " 3)	Moorpark,
Alexander, " " 2)	Dubois' Early Golden,	Montgamet,
Catharine, " " 5)	Large Early,	Peach.
J. L. Budd, " " 6)		

Select Quinces.

This valuable fruit is too well known to require an introduction. It has long been considered near the top among fruits. The quince succeeds best on a deep, moist, fertile, heavy, clay-loam soil.

	EACH.	PER DOZ.	PER 100.

Select Nectarine.

25c EACH; \$3.00 PER DOZ.

Boston,	Early Violet,	Stanwich,
Downton,	Elruge,	Victoria.

II Fruits.

Small fruits, such as Currants, Raspberries, Gooseberries, Blackberries, and Strawberries, have been paying their growers wonderful returns, and a great many fruit-growers are growing nothing else. Parties growing Gooseberries have been known to make as high as \$300.00 to the acre; and we have an instance where a man having six rows of Houghton Gooseberries, each row ninety yards long, sold over \$50.00 worth of fruit. Currants have long been grown by people for family use, and should be planted more as a market crop. They are very profitable, and we recommend the red varieties, such as Cherry and Fays.

Raspberries.—Parties growing the red Raspberries have been greatly troubled, and in some instances their crop has been a failure, by their being winter-killed. Although the Brandywine and the Cuthbert have been the leading varieties, they have proved a failure with a great many growers on account of this. The Miller Raspberry is being planted largely in place of these on account of its superiority over these varieties, it being hardier, the fruit larger, firmer, and averaging more fruit to the acre. It was known to bring fourteen cents a pint in the Philadelphia market last season. We recommend the planting of this variety. The Caps are hardier than the average red Raspberry, but their fruit is not as valuable.

Blackberries have been a very profitable crop for the last several seasons. We recommend the early varieties, such as Early Harvest, Wilson's Early and Lucretia Dewberry. The Lucretias are the earliest of the lot, and a great many growers have fallen in love with this variety. Sixty-five of these berries have been known to fill a quart measure, while it took over three hundred Early Harvest to fill the same.

CURRANTS.

20 CENTS EACH ; \$2.25 PER DOZEN ; \$10.00 PER 100.
